Overview:

Historically, the number in the need group for medical programs has been captured in the # in Med field on the UCMS screen. This coding scheme has been error prone, because it has not allowed staff to adequately record the number in the medical need group when multiple medical programs were represented on a single UCMS case.

Changes have been made to the UCMS screen. Some fields have been removed, others have been moved to a different location on the screen, and new fields have been added. These changes have been made to allow staff to adequately capture the number in the medical need group for up to five (5) medical programs on a single UCMS case. Please note that although the potential exists to code up to five (5) medical programs on a single UCMS case, the current policies and procedures concerning case combination for SPD programs still apply. For example, staff may continue to code OSIPM and QMB program eligibility on the same UCMS case. Staff cannot, however, code a two person case in which one person has OSIPM program eligibility and another has OHP program eligibility. We will look at the possibility of allowing "new combinations" of medical eligibility on a single UCMS case in later phases of this project.

The changes to the UCMS screen are scheduled for implementation during CMS end of month processing on the night of October 28th. At the same time, Oregon ACCESS will change to reflect the new fields.

Changes to the UCMS screen:

The following fields have been <u>removed</u> from the UCMS screen:

Med (Number for the medical need group income standard)

Pay Prf: Sch Hrs (Pay After Performance scheduled hours)

Actual/GC Hrs (Pay After Performance actual/good cause hours)

Appt (Redetermination appointment date)

The following fields have been <u>moved to a different location</u> on the UCMS screen:

Load (Caseload code)

Serv Wkr (Service worker ID)

The following new fields have been <u>added</u> to the UCMS screen:

OHP (number in the OHP need group)

Med prg/# (medical program and number in that program's need group)

The screen print below identifies the areas in which new fields have been added:

How do the new fields work?

In order to allow staff to capture the number in the need group for multiple medical programs on a single UCMS case, two new data items were added. As shown on the above screen print, "# OHP" and "MED prg/#" are new fields. For P2 OHP cases, staff should enter the number in the OHP need group in the # OHP field. For all other medical programs, the number in the medical need group will be entered in the MED prg/# fields.

The MED pgm/# portion of the UCMS screen actually contains four "sets" of fields. Each "set" has a place for the worker to enter a medical program identifier and a numeric figure that represents the number in the need group for that medical program. The medical program identifier generally corresponds to the case descriptors currently in use to identify medical program eligibility. For example, QMB would be the medical program identifier that would be used to indicate that there is someone on the case eligible for the QMB program.

Most of the medical programs that CAF-SS and SPD administer have case descriptors to identify eligibility. However, the OSIPM program has not historically required a case descriptor to denote medical eligibility for the OSIPM program. A new medical program identifier, OSP, has been created to allow staff to enter the number in the OSIPM need group. The new code is only for use in the

new MED pgm/# fields. It is not a required case descriptor.

Following are a list of valid medical program identifiers that may be used in the new MED pgm/# fields:

```
OSP = OSIPM

QMB = QMB, QMM

MAF = Medical Assist to Families

SMB = SMB, SMF

EXT = Extended Medical Benefits

SAC = Substitute/Adoptive Care Med

SCP = State Childrens' Program
```

For example, here is a typical SPD case type. The screen print below demonstrates how the UCMS case should be coded for the following scenario. A husband and wife apply for benefits. The husband is eligible for OSIPM and QMB and receives waivered services. The wife is not in the OSIPM need group. The wife is, however, included in the QMB need group. The number in the need group for OSIPM is one (1). The number in the need group for QMB is two (2). The UCMS case would look like this:

```

How is the number in the need group used in the UCMS eligibility and benefit calculations?

The computer will use the number in the need group to determine basic program eligibility and program benefit amounts. The number in the need group helps the computer determine which standards to apply to the case. This change will correct a long standing problem, by allowing a spouse to be included in the OSIPM need group, even if they are not in the benefit group.

A special note about unborns: Both the OSIPM and the OHP program include unborns in the medical need group. In the past, for some programs, the system would increase the need group "behind the scenes" to account for unborns. Now the system will use the number you enter in the MED pgm/# fields to determine the need group for each medical program. Staff should be careful to include unborns in the number entered in the MED pgm/# fields, as appropriate.

Conversion

During CMS end of month processing on the evening of October 28th, a system conversion will take place. In order to ensure that no clients are negatively impacted, the system will "calculate" the number in the medical need group using the old system coding. Then, the system will automatically fill the Med pgm/# fields with that number and the appropriate medical program identifier(s). Since we currently only have one number, it will use the same number for every medical program represented on the case. This may result in some situations in which the number in the Med pgm/# field is incorrect, due to the limitations of the current system. Staff should verify that the data in the new fields is correct as they update cases in the normal course of their work.

Additional Systems Corrections

We have also made system modifications to correct some long standing problems. There are essentially two areas in which we made changes.

First, since we began using the _5 program code to record presumptive eligibility in February 2003, we have not had a way to record the client's basis of need (e.g. blind, disabled). Two new case descriptors have been created. They are required on all _5 cases. They are:

PGB - OSIPM Presumptive or General Assistance Cash Eligibility based on blindness

PGD - OSIPM Presumptive or General Assistance Cash Eligibility based on disability

Second, at the request of field staff and field managers, three additional case descriptors have been created. These case descriptors are used to track a client's OSIPM presumptive eligibility status.

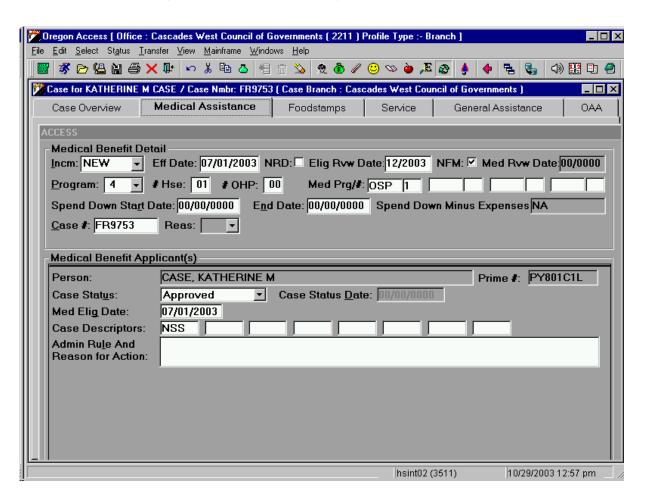

PMP - OSIPM presumptive medicaid pending

PMA - OSIPM presumptive medicaid approved

PMD - OSIPM presumptive medicaid denied

Oregon ACCESS

The Oregon ACCESS system has been updated to reflect the UCMS changes. Staff should continue to use Oregon ACCESS integration to update their UCMS records. The new fields are located on the Medical Tab of the Benefits section. Shortly after the initial mainframe conversion is completed, a systems conversion will take place on the Oregon ACCESS side. At that point, the data on the mainframe and Oregon ACCESS will be synchronized.

Examples

Following are some additional examples of how the UCMS case might look for various scenarios that are typically seen in SPD/AAA offices.

Scenario #1: An single adult living alone in the community. No waivered services. Client is OSIP and OSIPM eligible.
